

# Chiropractic: a credible option for patients in 2023

## Chiropractic Awareness Week 2023

52%

of Brits have lived with an MSK issue **longer than a year**

56%

avoided seeing their GP because of NHS

**waiting lists**

53%

of Brits are **looking to private healthcare** for MSK help

New data from The British Chiropractic Association (BCA) shows the impact NHS waiting lists are having on patients with Musculoskeletal issues (MSK). Chiropractors can provide those suffering with MSK conditions an alternative solution, giving patients choice when faced with long waiting lists. They offer patients a wide-ranging package of care which is patient-centred, supported by evidence and results in great patient reported outcomes. More people are turning to chiropractors to manage poor mobility, pain and wider health concerns arising from MSK issues before they worsen.
